PATENT

DAISY FORCE PUMP

—AND—

Portable Fire Extinguisher,

WITH AN AIR CHAMBER AND RUBBER HOSE.

Patented and Manufactured by

WM. M. JOHNSTON, Wilmot, Ohio.

This is the best pump ever offered for the money.

PRICE ONLY $2.00

Particular attention is called to the great advantage of a HAND LEVER to operate the plunger, which makes it work so much easier than other pumps, that it can be operated by a child, and will THROW A CONSTANT STREAM OF WATER A DISTANCE OF FIFTY FEET, and on the roof of ordinary buildings. The rubber hose is so attached to the top of the air chamber that the operator can regulate it, and, at the same time steady the pump with perfect ease. It is useful for washing windows, carriages and pavements, and insurance companies recognize its efficiency for the purpose of

Extinguishing Incipient Fires.

Many buildings have been saved by the timely use of such means and no home should be without one. It is indispensible for

SHOWERING GARDENS, LAWNS, SHRUBBERY, PLANTS AND TREES.

with Water, Liquid Fertilizer, or with Medicated water, for the purpose of exterminating insects, which are so injurious to orchards and nurseries. Just the thing for POTATO BUGS, CANKER and CURRANT WORMS and ROSE TRIPS. An ordinary Jet and Spray Nozzle are sent with each Pump. The cash must accompany all orders.

We have made arrangements so that we can furnish these pumps to our potato customers at $1.50 each.

To Our Friends and Customers:

Our Fourth Annual Catalogue appears in a new dress and considerably larger than anything we have before attempted. We believe in progress and are glad that our success in the past has been such that we feel justified in making this advance. Last year we were more liberally patronized than we had dared to hope. We are grateful for it. On our part we tried very hard to give satisfaction. The unsolicited letters of appreciation that have come in show that our efforts were not in vain.

Every one knows that the last potato crop was poor in all parts of the country. Consequently, potatoes are high in the market. Let this fact be remembered in considering our prices. We do not believe that last year *we were undersold by any reliable seedsman*, and we do not intend to be this year. We have determined to exercise the strictest economy in all our expenses. Our catalogues are neat, but not costly, and our advertisements, to which we call your attention, have helped us pay for them.

We beg leave to remind you of the advantage of purchasing seed *directly from the grower*. You not only *save at least one profit*, but stand a better chance of receiving seed that is *strictly pure*, and *true to name*.

Thanking you for your patronage, we remain,

Yours Very Truly,

L. L. Olds.

Pearl of Savoy.

We have no hesitation in recommending this variety this year above everything else. Why? Principally, because it yielded the very best out of forty varieties, both early and late. Also, because it is early—because it is smooth and well shaped, and because it always cooks well and is always good to eat. What more can any one ask for? Last year we made this statement: "We place this at the head of our list of early potatoes this year, for the reason that we are best pleased with it, all things considered of any we have tried during the last two years." After another year's trial we are still better suited with it. It is not often that a potato holds a high rank in so many different respects for several years in succession.

To describe the Pearl of Savoy in a few words we would say: It is a cross of Clark's No. 1 and Extra Early Vermont. Tubers are the same shape as Early Rose, and also the same color or perhaps a little lighter. Vines grow unusually

strong and vigorous, for an early potato, and considerably larger than those of the Early Ohio. In season it may be just a few days later than Early Ohio, Ohio Junior and Sunrise. At any rate the vines did not die last year quite so soon as the vines of those varieties. But it kept on growing after those varieties stopped, and yielded a third more. We would say to every one: Have some Pearl of Savoy if you don't have anything else.

☞Price List of all varieties will be found immediately following the des riptions.

Early Sunrise.

Coming to be regarded all over the country as the standard among the very earliest. We do not believe there is a variety in cultivation that will mature a crop quicker than Sunrise. It is a very smooth, pretty potato, after the style of the Early Rose. J. A. Salzer, the La Crosse seedsman, said of it in his catalogue of last year: "If we had but one potato to plant, Sunrise would be the one, it being so early, so remarkably fine in appearance, so delicate and rich in flavor, so heavy a yielder, cooking evenly and floury, and selling like 'hot cakes' in any market."

For two years, '88 and '89, we recommended it in our catalogue above everything else. Now we place Pearl of Savoy before it, not because it is earlier, but because it yields better. Although we are glad to be able to add that Sunrise last year yielded well up toward Pearl of Savoy.

Mr. W. S. Dunn, of Williston Dak. bought four barrels of Sunrise, and writes: "We are more than pleased with the potatoes."

Ohio Junior.

Here is what many have been looking for. Something to take the place of Early Ohio. It is almost exactly like it in every respect; shape, color, peculiar habits of growth and quick maturity. But it yields more to the acre. It is in fact the only seedling, thus far, of the old favorite, Early Ohio. It originated at Rochester, N. Y., with James Vick, and was

distributed all over by them, two years ago, in their famous State fair exhibit. Like its parent, it grows very compact in the hill, with small vines, so that the hills will bear to be closer together, than in almost any other variety. If you want to keep on with Early Ohio, as a great many men do, but would like to change your seed, don't buy Early Ohio, but buy Ohio Junior.

Early Ohio.

Too well known to need describing. We still raise them for those who must have them. Our seed is genuine.

Crane's June Eating.

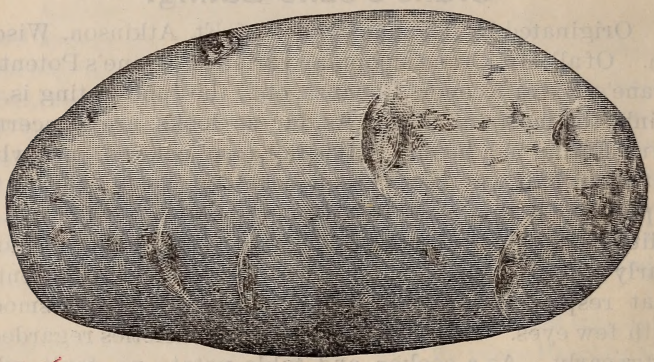
Originated by Thomas Crane, of Ft. Atkinson, Wisconsin. Of all Mr. Crane's popular varieties, Crane's Potentate, Crane's Extra Keeper, Bonanza, etc., the June Eating is, we think, the most valuable. As far as looks are concerned, June Eating is a beauty. It is not rose colored, nor white, but about half way between—a beautiful flesh color. Our experience is that early potatoes of about that color will sell a little more readily in the market than those of the color of Early Rose. The shape is all right, not much different in that respect from Beauty of Hebron. It grows smooth, with few eyes. In season it ranks with varieties regarded as extra early. As a cooker and table potato no fault whatever can be found with it, and as to yield, last year with us it stood second, the Pearl of Savoy only outyielding it. June Eating is one of the new ones, but it is certainly a splendid variety, and no one will make a mistake who decides to try it.

Everitt.

A good deal like Pearl of Savoy—very productive. In 1889 it yielded the best of all our varieties, but last year Pearl of Savoy went ahead of it. It is early, but not quite so early as Sunrise and Ohio. It grows large and smooth, is good shaped and of good quality. Very popular. Last year we had to refuse a good many orders after our stock was exhausted.

Thorburn.

Not like Early Rose in appearance, but like Beauty of Hebron, of which variety it is a seedling. More prolific than its parent, and fully equal to it in other respects. We would class Thorburn along with June Eating, as they are similar in their chief characteristics. The Thorburn, however, comes to us from the East, while Wisconsin has the credit of producing the June Eating. They are both profitable varieties to raise for early market, because their beautiful color makes them sell for the highest price.



Early Wisconsin, NEW.

The above engraving well represents a new, extra early variety of great promise, that we believe is here catalogued for the first time. It was first introduced by Mr. J. O. Borst, of Princeton, Wis. We will let him tell his own story in regard to it:

"I am not the originator of the Early Wisconsin potato, but I gave it its name. Another man in Columbia county raised it from a seed-ball from the Early Ohio, which was fertilized by the Snowflake (as he claimed). I met him at the Watertown fair in 1885. A premium of $3 was offered for the best *seedling* potato. Several specimens were on exhibition. This potato was the finest of any and took the blue ribbon. There seemed to be nearly a peck of them in an old market basket. I hunted up the owner, who said he would sell them for one dollar. Of course I took them. He said that was

the second year from the seed-ball. I took them home and found they weighed twelve pounds. I set them in the cellar and left them there until the 25th of May before I got my garden ready to plant. After they were planted we had one shower of rain *only*, enough to wet the ground about two inches, until the 18th day of July. They were then ripe, the leaves yellow. I was then raising Early Ohio, Early Rose and Snowflake, for early potatoes. *These new ones were ripe when the others were large enough to cook.* We soon found them to be of *superior quality as a table potato.* When I dug them in September, there were eight or nine bushels. I thought that was very good from twelve pounds of seed, raised on very sandy land and with such dry weather as we had. In order to distinguish them from every other variety, I named them EARLY WISCONSIN.

We found the first summer that they were of extra fine flavor as a table potato, and so they continue. They are just as good *baked* or *boiled* as soon as they are large enough to dig. They do not grow as large or yield as much as some other kinds, but their earliness and other fine qualities make them a very valuable potato."

We have tried Early Wisconsin two years and are much pleased with it. The tubers are remarkably smooth and uniform in shape and are very handsome. The skin is light rose colored or nearly flesh color, shading to pink about the eyes. The yield last year was very satisfactory, but it is chiefly valuable, as Mr. Borst says, on account of its extreme earliness, and on account of its fine table qualities. Our stock of this new seedling is small and the price is necessarily quite high, but we urge every one to try at least a few of them as we believe it is destined to become very popular.

Vick's Extra Early.

Like Snowflake, in appearance and also in quality. The only real early white potato of this style we have ever found that would yield well. Skin covered with a netting which is a sign of a good cooker. Tubers very smooth and regular in shape; eyes so even with the surface that it is difficult to find them. Quality the very best. Does not yield so much as some varieties, but we think it will be sought after on account of its very fine table qualities. Last year our stock ran short, but we have plenty this year.

Early Maine.

Quite a nice looking, rose-colored potato. Earlier than Early Rose and claimed by many to be the most productive of all early varieties, although it has not so proved with us.

Lee's Favorite.

Another early sort, similar to Beauty of Hebron in shape, light flesh colored, shading to pink and red around the eyes, is advertised in almost every catalogue and has become very popular. It has not yielded extra well, however, with us. We have only small potatoes to offer.

Beauty of Hebron.

Well known everywhere. We still continue it, but do not recommend it because too badly run out.

Chas. Downing.

Noted for its very fine quality. Skin white, eyes few and very even with the surface. Tubers nearly round in shape. An Eastern variety. Very popular there. We said last year that it had not yielded very well with us. We are glad to say that in 1890 it did much better than before, so that it compared favorably with our best varieties.

Early Albino.

A very handsome, smooth, rather long, white potato. A cross of Early Ohio and Snowflake. Introduced by Mr. Vaughan, in 1888, so that it is still new and not very well known. About the only early potato we ever saw of this shape and color; viz., long and white. It yields very well and is such a fine looking potato that it sells readily. We found it in such demand for market last summer, that we sold ourselves short, and have only small ones to offer.

☞Read about our "Daisy Force Pump" on the inside of front cover. We have found it especially valuable for *washing buggies* and *windows*.

Mr. E. L. Coy, originator of Thorburn, Empire State, Beauty of Hebron, Puritan, White Elephant and others, thus describes this variety and its origin:

WEST HEBRON, N. Y.—The "EARLY VAUGHAN" is the only one that proved to be of any special value from a large number of seedlings of 1885. This one from the first showed a marked superiority in all the essential points that are required in making up a first class early variety, such as vigor and healthfulness of vine and tuber, productiveness and fine table quality. One by one the others were discarded on the principle of the "Survival of the fittest," until this stands alone of my seedlings of 1885. This is an inbred seedling of the grand old Peerless and inherits its parent's vigorous constitution. Its skin is a beautiful flesh color all over the tuber, not clouded like Beauty of Hebron and White Elephant. Flesh is very white and of a delicate rich flavor. It ripens with the Early Puritan and like it, the tubers when less than half grown, are dry and fine for table use. My crop of "EARLY VAUGHANS" this season, like all early varieties, was injured by the drouth of July, making the tubers much smaller than they otherwise would have been. Still they average larger than any of the 20 early varieties I grew this season, except the Thorburn which was its closest competitor in productiveness and freedom from rot. I predict that this new seedling will soon occupy a high and enviable position for market planting as well as for the private garden. I have sold my entire right and ownership in this valuable and beautiful seedling to J. C. Vaughan, of Chicago, for a large price, and firmly believe that all who purchase from him will thank him for introducing it.

EDWARD L. COY.

Price, lb., 50c.; 3 lbs., $1.00, prepaid; by express not prepaid. 1-2 peck, $1.25; peck, $2.00; bush., $4 50; bbl., $10.00.

Garfield.

A splendid potato for main crop. It is a seedling of Early Vermont, hybridized with Excelsior. It excels both of its parents, however, as a market potato. In color and general appearance it is like Snowflake, but is a little longer, being more like Vermont in shape. Is later in season than Snowflake, but is not a late potato. The most important point, however, is that it is equal to Snowflake in quality, which of course is regarded as the standard, while the yield is much better. We have sold more Garfields during the last three years than any other variety and we believe they have always given satisfaction. They did not yield as well as usual last season, but for that matter none of our later varieties did as well last year as usual.

Mr. Chas. B. Tingley, an Ohio potato seedsman, writes us; "The four barrels of potatoes received in good order. Empire State, Alexander's Prolific and Garfield are very fine. I like the looks of the Garfield very much."

Empire State.

Undoubtedly the most popular of all main crop varities. It has been very widely advertised, and is recommended by prominent seedsmen, east and west. It is after the Burbank's style. Is very handsome and very productive. An unusually strong grower. Vines grow larger than those of any other variety we have ever seen, completely hiding the ground. Originated in New York, as its name implies; it has been introduced very rapidly into all parts of the country, and everywhere seems to have stood the severest tests. It comes from the White Elephant, and was originated by the same man, Mr. E. L. Coy. It ripens about the same time as Burbank's and White Elephant, and is what we would call medium late. Although it resembles Burbank's in color and in general appearance, and sells for Burbank's in the Chicago market, it is far superior to it in quality, Burbanks being really a very poor quality potato.

Care must be taken in planting Empire State not to use

too much seed. The eyes are so very strong that one makes a good hill. We anticipate a great demand for this variety and have reserved a very large stock. We planted more ourselves both in '89 and '90 than of any other variety.

Alexander's Prolific.

Introduced by Mr. Vaughan in 1885, and still recommended by him as one of the best on his list, all things considered. We give his description: "Skin white, well covered with rough netting, [which denotes a good cooker], eyes few and lie even with the surface, flesh pure white, with finest flavor; fine grained, dry and floury. Being long, large and white, it brings the highest market price. A very vigorous grower and to a great degree resists the ravages of the bugs. The tubers grow compactly in the hill, are easily harvested, and vary from medium size to very large. They are wonderfully productive." Our own experience with Alexander's Prolific has been very satisfactory. We have raised it since it was introduced and we think more of it to-day than ever before. It has always been in demand and seems to be increasing in popularity.

Queen of the Valley.

A very large late potato, and an immense cropper. Has been raised a great deal in competition for prizes offered for largest yields. Tubers few in a hill but almost all large. Even last year we found hardly any small ones. Shape, oblong, flattened, somewhat square-cut at the ends. Color, deep pink at the seed ends, gradually shading to nearly white at the stem end. Eyes are usually quite deep set, but tubers are never prongy. We received a good many orders for this variety last spring, and we also planted liberally of it ourselves, as we expect to continue to do. We regard it as a sort of an iron-clad. It is pretty sure to yield a good crop in hard years. We have never known of its rotting and it keeps without sprouting late into the spring, when it is especially valuable as an eating potato.

American Giant.

Rightly named, an enormous potato and very showy. One of the largest in cultivation, but of good shape for cooking, being long and smooth. Mr. Harrington, of Delavan, places this among the best five out of his list of 700 varieties. This variety also comes from New York, and in color, shape and season it is much the same as Empire State. The tubers however are thicker and also longer, with fewer in a hill. We have measured them ten inches in length without a prong or irregularity, of any kind, while Mr. Harrington reports specimens 13 inches long and weighing from three to four pounds, without an imperfection. In fact the tubers are noted for their symmetry and uniformity of shape.

The first year we tried American Giant it yielded at the rate of 450 bushels per acre. But although it is such a great yielder and of so very fine appearace, it is rather lacking in quality.

Dakota Red.

The most prolific late potato we know of, and also the hardiest. It never rots and is almost sure to yield well in spite of a drought. It generally grows rough and irregular in shape, but it is so sure to produce a crop and keeps so well way into the summer that we consider it a very valuable variety to have. It did not originate in Dakota as its name might indicate, but is an eastern potato. It has been pretty thoroughly distributed however all over, and is catalogued by nearly every seedsman in the United States.

In 1889 Dakota Red secured the prize of $500, offered by the AMERICAN AGRICULTURIST for the largest yield of potatoes from one acre of ground. The prize was awarded Mr. Coy, of Presque Isle, Maine, and the yield was 738 bushels. Last year, in a similar contest, the AGRICULTURIST offered $550 in prizes. Out of forty-one who stood the highest in yield of those reported, 12 were of Dakota Red. No other variety was planted by more than five men. This shows the estimation in which it is held as a heavy cropper.

Dakota Red has been called poor in quality. We would hardly call it poor. We have just had some on our table today. They were nice and mealy and tasted good, and for our own use we would about as soon have them from this time, (Feb. 1) on, as any. But what if they are of rather poor quality, and what if they are rough and irregular, and what if they do not sell quite so readily as Burbanks, they have so many other good qualities that we are not afraid to recommend them. Every one should have some to make up his assortment.

Other Varieties.

The following 18 varieties have had only one year's trial with us. Most of them are quite promising. Some are already very popular and were sold last year at a high price. We do not describe them because we have not thoroughly tested them. We will furnish any of them while our stock lasts, by mail, prepaid, at 20 cts. per pound; 3 lbs., 50 cts. By express or freight, not prepaid, 1 lb. 10 cts.; ½ peck, 40 cts.; peck, 75 cts.

Stray Beauty,	Early Illinois,
Crane's Extra Keeper,	Early Market,
Dandy,	Fearnaught,
Bonanza,	Delaware,
Gov. Foraker,	Burpee's Superior,
New Queen,	Summit,
Crown Jewel,	Pootatuck,
Monroe Seedling,	Cream of the Field,
Rural New Yorker, No. 2.	Early Puritan.

We believe that our varieties are the best in cultivation. If we did not think so, we would discard them and get those that are the best. It is our aim to try all the new sorts as fast as they are introduced, but we do not recommend any variety until we have proved it ourselves. We drop the old varieties when we find new ones that we are satisfied are better.

We have a fine stock of seed to offer. Our crop last year was very good, considering the dry season. Although all around us the potato crop was almost an entire failure, ours was nearly an average yield. We believe that if every farmer would follow the principles laid down in our "Ten Secrets of Successful Potato Raising," there would be less complaint about potatoes being a poor crop. We believe our good yield last year was due chiefly to deep plowing, early planting and frequent cultivation. We have a few hundred copies of the pamphlet referred to above, left over from last year, which we will furnish free on application.

PRICE LIST.

Any variety in the above table, by mail, post paid. 1 pound, 20 cts; 3 pounds, 50 cts. One pound, by freight or express, not prepaid, 10 cts.

Special Offer. As a Special Offer we will make up a barrel of any three varieties, your selection, at barrel rates, or a barrel of any twelve varieties at bushel rates.

Discount. We will make a discount of 5 per cent on every $10 order, and a discount of 10 per cent on $20 orders: These discounts apply to all varieties in our catalogue except Vaughan. There is no reduction on the Vaughan. We are simply selling them for the introducer. Our prices are his prices.

Terms. Our terms are cash with order. Every order will be promptly acknowledged, and the potatoes sent as soon as danger of freezing is past, providing the order is accompanied by the price. Letters of inquiry will receive prompt attention. In ordering please use order sheet.

If late in ordering, state whether or not you will take something as a substitute, if the variety called for should be all gone.

We are located on both the C. & N. W. and C. M. & St. P. Railroads, 78 miles from Chicago, and 5 miles from the Illinois state line.

If you order to be shipped by express, money must be sent sufficient to prepay charges.

All potatoes will be labeled and carefully packed so that they will not get mixed.

No extra charge for packages. Our barrels hold about three bushels by measure, and 2¾ bushels by weight. We also have four-bushel barrels that we will use when we can. Will ship in sacks where preferred.

Our Second Sized Potatoes. As will be seen from our price list we offer second sized tubers of nearly all varieties. All of our potatoes are carefully sorted. While none grew extra large last year, still unless undersized potatoes are ordered, we expect to furnish good market size stock large enough to suit anyone

Our second size are clean and in good shape, and we do not think they are too small to plant—about the size of hens' eggs—at least none smaller than walnuts.

About Planting Small Potatoes we refer you to an article written by us and published in the ORANGE JUDD FARMER, of Jan. 24, entitled, "Potato Experiments." There is not space to give the article here, but our experiments showed that, when small potatoes are used for seed the yield per acre is about the same, and the size of the potatoes produced nearly as good as when large potatoes are used, providing the small seed is prepared right.

There must not be too many eyes in a hill. While we found that it was folly to remove the seed end from large potatoes, with small ones the best results were obtained by cutting off the seed end and throwing it away and then dividing the tuber. Cut fine in this way small potatoes will go much farther than large ones and are more economical.

Freight Rates from Clinton, Wis.

Last year we received a good many letters inquiring the Freight Rates to different stations. We have therefore secured from our agents here the rates per hundred pounds on potatoes in barrels or sacks, to a few principal points. To ascertain the rates to places east of Chicago, find out the rate to Chicago and then add 16 cents. Of course the rates given below are subject to change.

Springfield Implement Co., Springfield, Ohio.

HOOVER POTATO DIGGER

The Best Digger on Earth, so far as I know. T. B. TERRY.
In Rural New Yorker.

IN WISCONSIN.

E. H. CURRIER "Shells Out" 8,212 bushels in one week; 2,288 bushels in one day; 49,000 bushels from 322 acres.

You will probably never sell me another Hoover Digger, because the one I bought of you in '88, that has already dug 322 acres,---49,000 bushels---will be a new machine again by using not over $15.00 for repairs. It was impossible to make a big showing for any one week, as they had to be picked up every night on account of frost, so the Digger usually stopped at 3 to 4:30 P. M. The best week's work for 1889 was 8,212 bushels. The best day's work of that week was Friday, 2,288 bushels.---RIVER FALLS, FEB. 1, 1890.
